ENTRANCE

OVERHEAD PROTECTION

With Australia's climate extremes exterior/entrance doors will weather differently and timber doors are more susceptible to the elements than steel or aluminium.

Depending on your location and aspect the required overhead protection will vary, with tropical areas generally requiring more overhang than southern states. The chart below will assist in determining the size of overhead protection which will vary depending on home design and adjacent walls.

OVERHEAD PROTECTION CHART

Climate	Door direction			
	North	South	East	West
Coastal	A = ½ B	A = B	A = ½ B	A = B
Tropical	A = B	A = B	A = B	A = B
Arid	A = B	A = ½ B	A = B	A = 1½ B
Mild	A = ½ B	A = ½ B	A = ½ B	A = B

Dimension 'C' – subject to adjacent walls – minimum width same width as entry frame

Note: colour choice for your exterior door will also affect weathering. Dark colours absorb heat, accelerating door deterioration, warping and bowing.

For door guarantee refer page 31.
